

THE WAY TOLLS ARE CALCULATED IS CHANGING

Starting from 1 March 2024

new vehicles will be reclassified according to their CO₂ emissions. If you own a vehicle registered after 1 July 2019, check its CO₂ emission class in the manufacturing documents or at:

www.mytocz.eu/co2/en

DO I NEED TO TAKE ANY ACTION?

THE CRITICAL DATE IS THE 1st VEHICLE REGISTRATION

- It is not mandatory for carriers to take any action. Initially, all vehicles will be classified in CO₂ emission class 1 which, according to preliminary estimates includes more than 90% of vehicles.
- Vehicles with a first registration date of before 1 July 2019 and all M2 and M3 vehicles (buses) will not be eligible for a higher CO₂ emission class (2 – 5). Operators of these vehicles do not need to take any action *(except for vehicles powered purely by electric energy and hydrogen - these belong to CO₂ emission class 5).
- The change introduces five CO₂ emission classes. Charges are highest for CO₂ emission class 1, while CO₂ emission class 5 is reserved for emission-free vehicles.
- The assignment of a higher CO₂ emission class for vehicles registered after 1 July 2019 is automatic. If the required information about the vehicle is not available to accurately assign it to CO₂ emission class 2, 3, 4 or 5, it will be assigned to CO₂ emission class 1. Use the CO₂ Emission Class Finder for verification at www.mytocz.eu/en/co2.

I HAVE A VEHICLE REGISTERED AFTER 1 JULY 2019 AND THE EMISSION CLASS FINDER CONFIRMED THE POSSIBILITY OF ASSIGNMENT TO A HIGHER CO₂ EMISSION CLASS. WHAT SHOULD I DO NEXT?

- If you require your vehicle to be assigned to a class higher than the CO₂ emission class 1, you will have to submit documents demonstrating that it meets the requirements of the Electronic Toll System (in particular data from the manufacturing documents: COC, CIF). This can be done by submitting the documents through the Customer Zone (www.mytocz.eu/en) or via e-mail, or at Contact Points. Selected fuel card issuers will also help their clients to submit the documents.
- If the vehicle is not classified correctly, the operator will not face any penalties.

YOU CAN FIND DETAILED INFORMATION ABOUT THE INTRODUCTION OF CO₂ EMISSION CLASSES AND THE CO₂ EMISSION CLASS FINDER AT WWW.MYTOCZ.EU/CO2/EN
